

Why using Non-Woven fabric (Crop Cover) in Agriculture?

Polypropylene is the most-used polymer for woven shade cloth fabrics. The UV is formulated with additives and pigments to provide resistance to sunlight and weathering. White pigmentation helps provide a high degree of sunlight resistance.

Benefits of Parth Crop Cover:

- Protects from sun burn.
- Supports organic farming.
- Helps to retain co2 leading to higher photosynthesis.
- Provides optimum micro climate for growth of fruits by allowing passage of air, water moisture and sunlight.
- Saves water by 30-40%.
- Prevents growth of weeds.
- Healthy and robust plant.
- Improves fruit uniformity and quality fetching good market prices
- Maximizes plant growth by providing a mini-greenhouse effect increases yield and thus higher returns.
- Protects from birds and animals.
